

# clrstream

INR 1/user/day

## Clrstream from SkyConnect

Protect your organization from email-borne threats such as spam, ransom-ware and virus with spam and virus protection from Trend Micro Systems. Ensure email service availability at an affordable price with reliable mailbox hosting on Mithi SkyConnect.

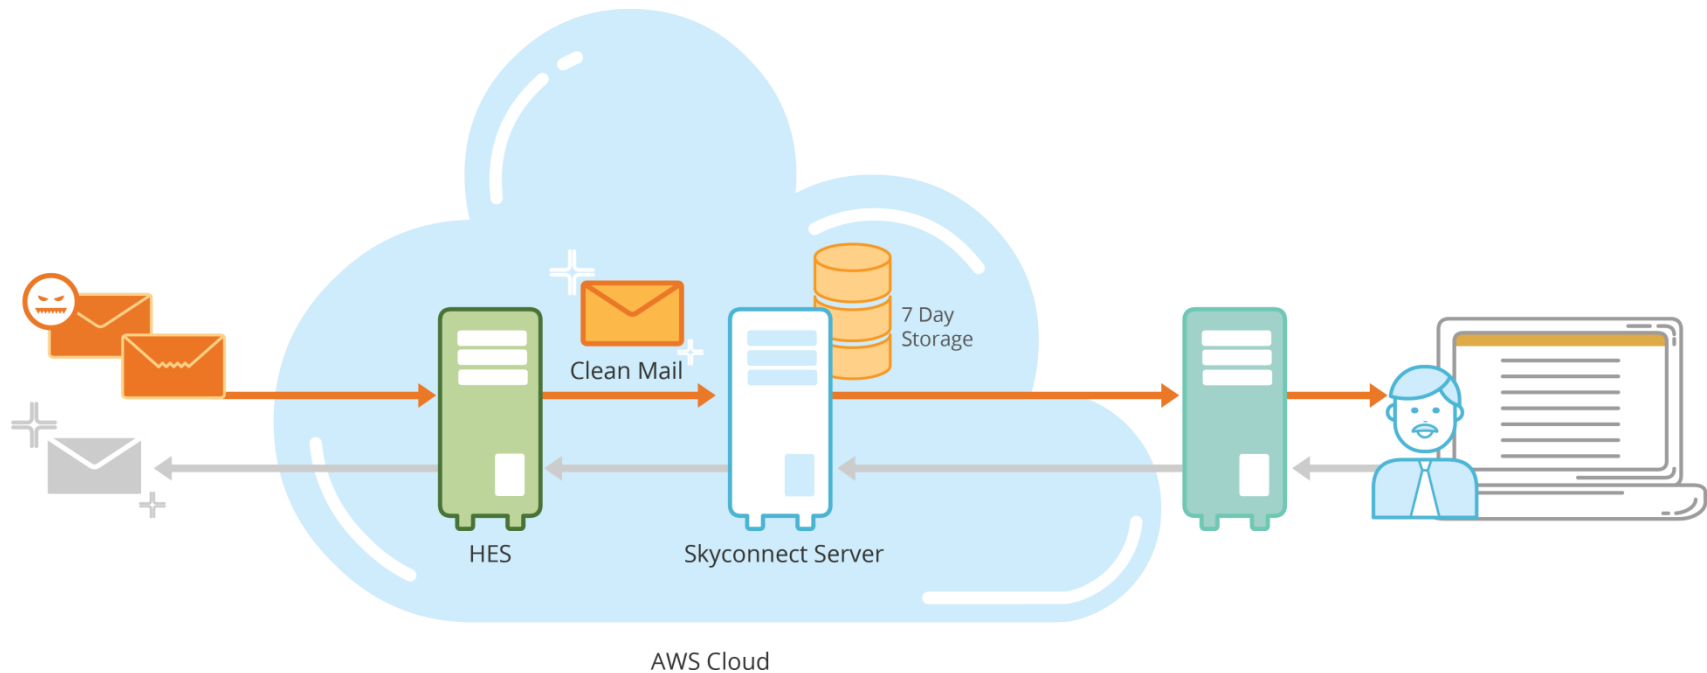

Clean mail + Disaster Recovery for mail Servers

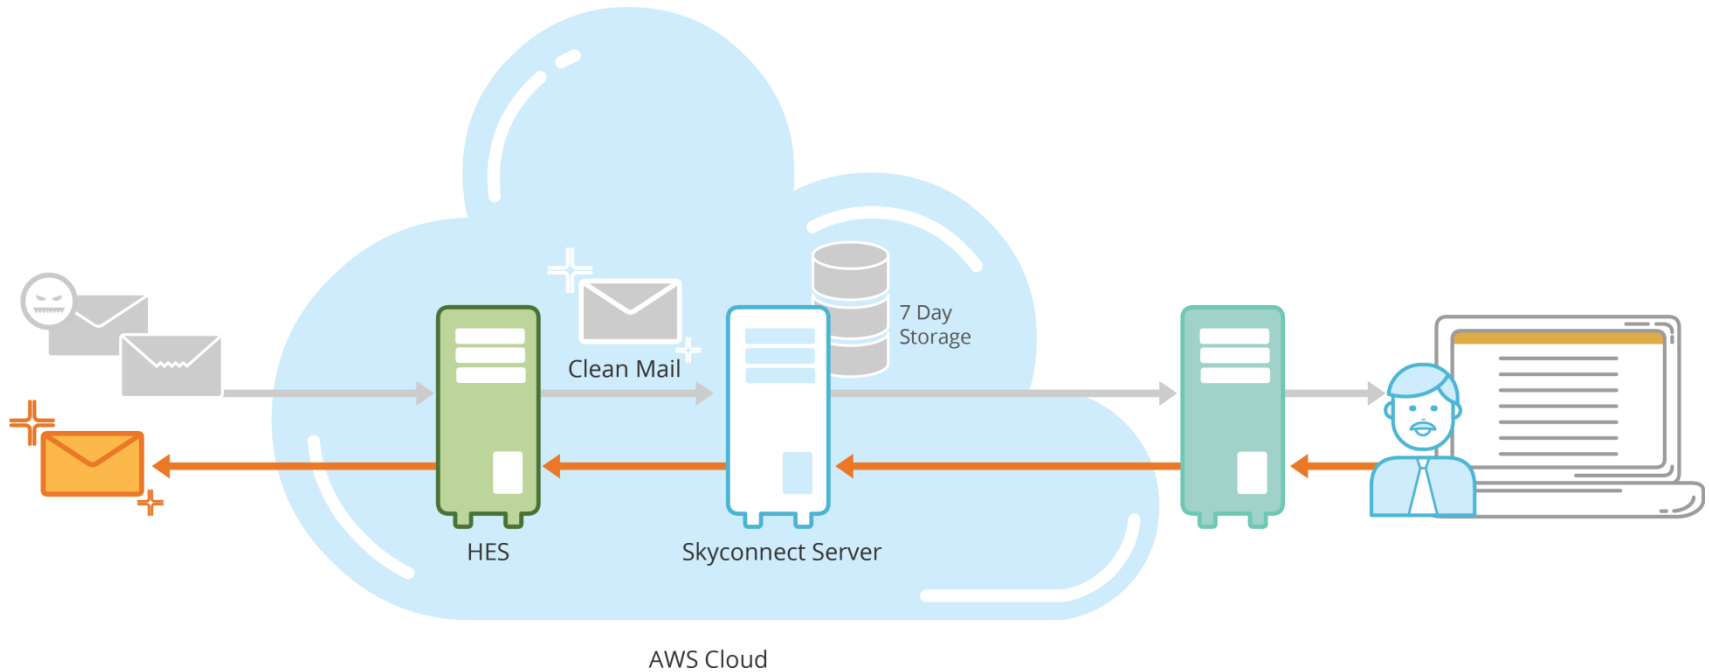

Email & Team Communication for the Smart Business

# Working of the clrstream

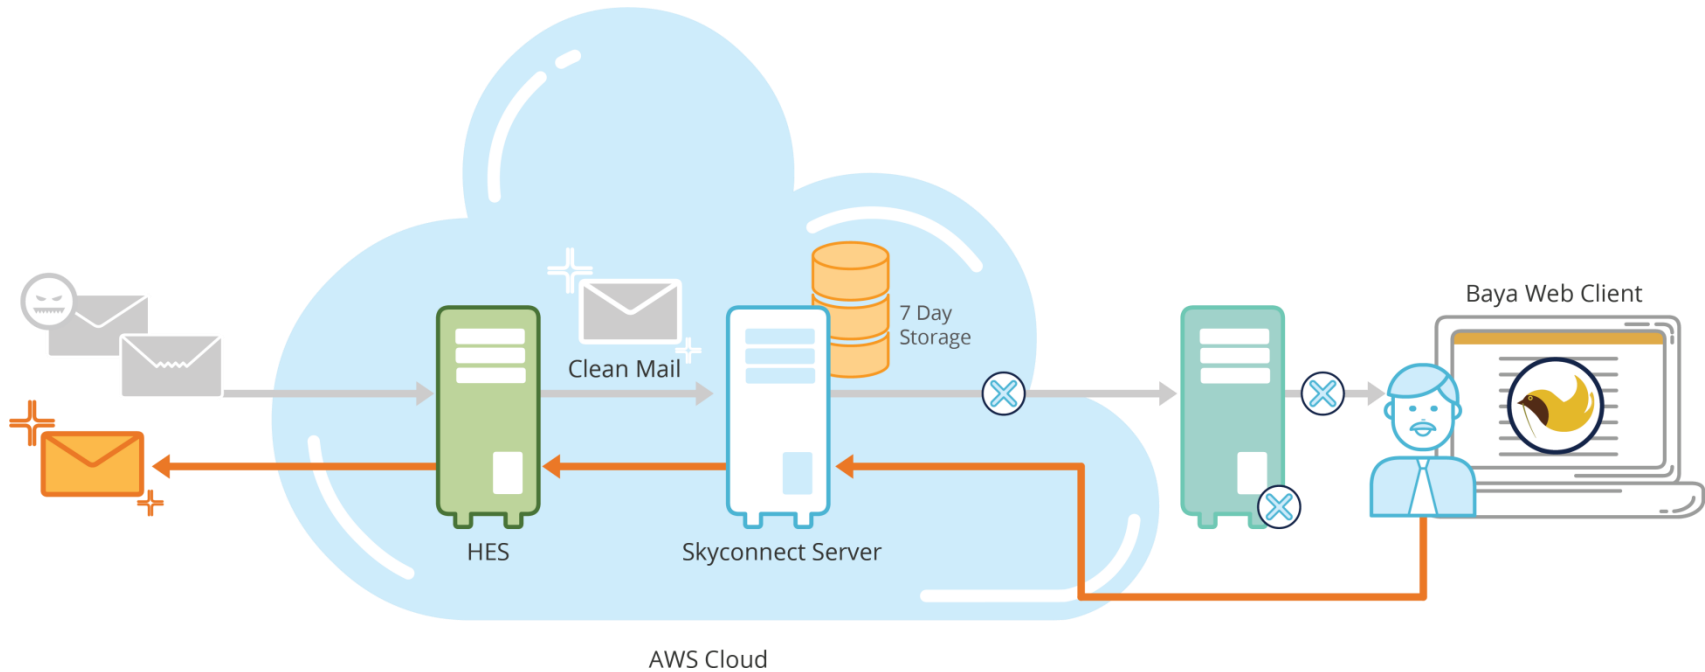

The MX of the domain will be pointed to the Trend HES servers hosted on AWS. The mail will be cleaned of spam, viruses, ransomware and other unwanted content. The clean mail will be delivered to the domain on the Mithi SkyConnect servers also hosted on AWS. A copy of the mail will be delivered to user's mail boxes on the SkyConnect servers and the original mail forwarded to the primary server of the domain hosted either in the company premises or another data centre.

# Working of the clrstream

Similarly, outgoing mail will be routed via the Mithi Sky Connect servers and HES to the destination domain. The outgoing mail will be scanned for virus.

# Working of the clrstream

In case of the primary server going down, end users can access their mail boxes on the Mithi Sky Connect servers using the easy and intuitive web client Baya. They will receive new mail and also view and respond to the mails sent and received over the previous 7 days.

Clean mail + Disaster Recovery for mail Servers

Email & Team Communication for the Smart Business

# Benefits of the clrstream

Clean mail + basic disaster recovery at affordable price

Reduce bandwidth on primary data centre

Reduce mail server load

Zero hardware and software upgrades
